FOR IMMEDIATE RELEASE

## **Servi-Tek Re-Launches Company Website**

San Diego, CA, December 20, 2008 - Servi-Tek celebrates its continuing success with a re-launch of its website. After only two years, the San Diego-based company has grown from a handful of employees into a national company with 250+ associates and nearly 100 accounts. With the company's focus on technology, the website represents their commitment to providing accurate and useful information for its users.

Additionally, phase two of Servi-Trak™ has been released to improve account accessibility and information. Now, inspections can be reviewed, updated and edited by users in real time. Furthermore, tenants or departments can access the work order system and review individual areas of responsibility, while managers can evaluate tenant requests. Lastly, a calendar of periodic specifications has been added for convenience.

Servi-Tek's founders combine over forty years of industry experience and offer technological advancements typically ignored by the service industry. In order to provide their customers with the convenient and customized service they deserve, they couldn't rely on current technology used by their competitors.

"We found that the current technology in our industry was missing important elements. In order to implement our company's mission of providing the best service possible, we had to develop our own technology," said Eric Friz, one of the founders of Servi-Tek.

For Servi-Tek, it is not just "janitorial as usual." By combining technology with functional tools that improve efficiency in the workplace, Servi-Tek provides unparalleled service in the industry. Through their proprietary Servi-Trak™ system, clients have access to a tailored and trackable web-based database that delivers accurate information and timely service. Developing lasting relationships with their clients and associates is the cornerstone of their success. Servi-Tek's program follows green cleaning standards for

every account they service in California, Arizona, and Nevada. For more information on Servi-Tek, visit [www.servi-tek.net](http://www.servi-tek.net)
